

Copying files to and from My computer: c:\ProgramData\SilhouetteELAR4

(Windows - new with Version 4.2.x)

If you have been saving your SilhouetteELAR4 classes and comment bases on your Windows computer but now want to save on your VSB OneDrive, you may also want to copy your older files to your OneDrive.

The issue: On most VSB computers you are not able to 'see' the c:\ProgramData folder from a Browse for Folder requester. This is because of a Windows setting that hides it from view.

The solution:

1. In Utilities, select the **This computer** radio button, **Exit** and go to the **Student Reports** window.
2. *If you want to copy classes **to** your OneDrive,* select **Export Folder**. Then use **Select Destination** to select your OneDrive folder, check the classes to be copied and click on **Export**.
3. *[If you want to copy classes **from** your OneDrive,* select **Import Folder**. Then use **Select Source** to select your OneDrive folder, check the classes to be copied and click on **Import**.]
4. Comment Bases: use the same procedure to copy your comment bases.
5. When all the copying has been done you may want to reselect your VSB OneDrive as the default location to save your files.
